

Alpenföhn *Groß Clock'ner*

Free to the motte „extreme performance efforts extreme cooling“ the EKL AG is sending the „Groß Clock'ner“ under the brand Alpenfoehn on its way. The cooler is the flagship of the new brand, which is cooling all current available CPUs with a smile. But this is no suprise! EKL assembled this cooler with four amazing 8mm-heatpipes, which are contacting the CPU directly because of the brand new direct touch technology, and so the heat of every spitfire will be transmitted to the aluminium-fins fast and efficient.

The enormous dimensions of the heatsink allows the 120mm-fan to turn with 1200 rpm max., and so the noise is with 0,2 Sone nearly inaudible. The fan is mounted with two metal-brackets, which assures a safe hold in every situation.

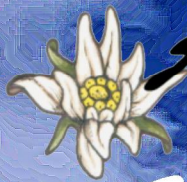

So this cooler is the first choice for all over-clocker and ambition gamers, who are seeking for a maximum performance without any compromises.

Also with the delivery-content EKL wasn't stingy!

A high-end thermal-grease, a fan-control and a retention-modul for S775 are enclosed to this unrivaled cooler and must not be ordered separately.

Cooler specifications:

article number:	840000000018
total high:	157 mm
paste:	2 gr. shot TC5022
mounting:	universal mounting for Intel S775 and AMD(+)

Alpenföhn Groß Clock'ner

fan specifications:

model:	YS Tech KM121225LS
bearing:	sleeve bearing
size:	120x120x25 mm
cable length:	300 mm
voltage:	12 VDC
speed:	1200 rpm/min
noise:	17 dB(A) max. (0,2 Sone)

heat sink specifications:

size:	83,5x125x157mm
material:	Alu Lamellen mit vier 8 mm Pipes
usable for:	Alle Intel LGA775, AMD , AM2 und AM2(+) processor.
